

SAFETY LETTER

Dear Customer,

Safe operation of all bulk material handling equipment is of paramount importance to Screw Conveyor Corporation. Our equipment is very safe to use except when it is not operated, installed and maintained properly for safe operation. To reinforce with you its importance SCC is incorporating safety packages into our Web site.

Additionally, we know from time to time parts of units/systems are replaced or equipment is repainted to maintain a certain look within your facility. To that end, we are providing the Conveyor Equipment Manufacturing Association (CEMA) manual detailing proper placement of safety stickers. To insure proper employee safety you may need to replace safety labels. Likewise use of our equipment by an OEM will require proper signage as well.

Should any of the safety labels supplied by the equipment manufacturer become unreadable for any reason, the equipment USER is then responsible for the replacement and location of these safety labels. Replacement labels can be obtained from CEMA or SCC.

Screw Conveyor Corporation and its employees are dedicated to offering the finest material handling equipment in the world for your application. Please join us in ensuring a safe environment for your employees and customers.

Sincerely,

Garry M. Abraham

CEO/General Manager

Screw Conveyor Corporation
